

All New Midland Industries **BUTTERFLY VALVE**

PLACE AN ORDER TODAY!

The Best in **BUTTERFLY VALVES**

Introducing the 9650 wafer-style and 9660 lug-style butterfly valves from Midland Industries. These ductile iron body valves are rated 200 PSI and come in two different disc and seat combinations. The nickel plate ductile iron disc with Buna-N seats will handle many different media at temperatures of up to 210 degrees. The CF8M 316 stainless steel disc with EPDM seats can be used in more harsh conditions while handling temperatures up to 180 degrees. The 10-position index plate allows for accurate flow rates when throttling the flow of the application.

Common stem size groupings means fewer stem extensions and replacement parts when it's time for service. Our butterfly valves have an ISO rated top flange pattern allowing for easier, direct mount actuation applications. Whatever size and valve diameter you need, Midland Industries is sure have what you are looking for.
