STAINLESS STEEL FITTINGS & NIPPLES

MANUFACTURED FOR QUALITY

STAINLESS STEEL FITTINGS & NIPPLES

Our sales team is knowledgeable, qualified and experienced to handle all your stainless steel fittings & nipple needs. Our Type 304 & Type 316 fittings & nipples are the perfect fit for a variety of applications. Because of its ability to withstand the corrosive action of various acids, Type 304 is especially suited for all types of applications in the food and beverage industry, residential & commercial water systems, commercial & industrial piping systems, industrial projects for sanitary or highly corrosive applications, and frequent use in the marine industry.

For higher corrosion resistance in instances such as steam, our Type 316 is the answer. With the addition of molybdenum up to a maximum of 3%, the corrosion resistance of this chromium-nickel alloy is able to withstand attack by many industrial cleaning solvents, sodium and calcium brines, hypochlorite solutions, phosphoric acid, and many more! All Stainless Steel Fittings and Nipples conform to specification ASTM A312/SA312, or ASTM A733, and threads conform to requirements of ANSI/ASME B1.20.1.

FOR MORE INFORMATION

Innovative, efficient and reliable. Designed for a variety of applications.

- Type 304 is an austenitic steel possessing a minimum of 18% chromium and 8% nickel, combined with a maximum of 0.08% carbon.
- Type 316 has an addition of molybdenum up to a maximum of 3%.
- Manufactured for harsh environments
- Manufactured to current ASTM A312/SA312, ASTM A733, or ASTM A-351
- Thread Ends: ANSI/ASME B1.20.1
- Working Pressures Ranging From 150 : 3000 PSI
